# 1 Introduction

---

NayePankh Foundation is a youth-led social organization working towards uplifting underprivileged communities through initiatives related to nutrition, education, women's health, and social welfare.

In order to maximize the effectiveness of such initiatives, it is important to identify regions requiring immediate attention. This project uses national datasets to study social indicators and generate insights that can support future welfare programs.

## 2 Problem Statement

---

Social indicators vary significantly across Indian states. Without proper analysis, identifying regions with the greatest need becomes difficult.

The primary objective of this project is to:

- Analyze child nutrition indicators.
- Study women empowerment and health-related metrics.
- Identify high-priority regions requiring intervention.
- Support evidence-based social welfare initiatives.

## 3 Objectives

---

The major objectives of this project are:

- To analyze state-wise child malnutrition indicators.
- To study women empowerment indicators.
- To compare social conditions across states.
- To create interactive dashboards for visualization.
- To derive meaningful insights and recommendations.

## 4 Datasets Used

---

### 4.1 National Family Health Survey (NFHS-5), 2019-2021

The NFHS-5 dataset contains information related to:

- Female literacy
- Anaemia among women
- Health indicators
- Child health
- Nutritional conditions

**Source:** Government of India (data.gov.in)

### 4.2 Poshan Tracker Dataset (2022-2024)

The dataset contains state-wise malnutrition indicators including:

- Stunting
- Wasting
- Underweight prevalence

**Source:** Government of India (data.gov.in)

## 5 Tools and Technologies Used

| Tool            | Purpose                                   |
|-----------------|-------------------------------------------|
| Power BI        | Data visualization and dashboard creation |
| Power Query     | Data cleaning and transformation          |
| DAX             | Calculation of measures                   |
| Microsoft Excel | Data preprocessing                        |

## 6 Methodology

The following methodology was adopted:

- 1 Data Collection:** Government datasets were collected from data.gov.in.
- 2 Data Cleaning:** Involved replacing missing values, handling special characters, converting data types, and removing inconsistencies.
- 3 Data Transformation:** Power Query was used to prepare datasets for analysis.
- 4 Data Modeling:** Relationships between datasets were established to facilitate cross-analysis.
- 5 Dashboard Development:** Interactive dashboards were created in Power BI.
- 6 Insight Generation:** State-wise comparisons and trends were analyzed to derive actionable insights.

## 7 Dashboard Components

### 7.1 Executive Dashboard

Provides an overview of: Average Stunting Rate, Average Wasting Rate, Average Underweight Prevalence, Female Literacy, and Anaemia Indicators.

### 7.2 Child Nutrition Dashboard

Analyzes Stunting, Wasting, and Underweight prevalence. Provides state-wise comparisons and trends.

### 7.3 Women Empowerment Dashboard

Focuses on Female literacy, Anaemia among women, and Health-related indicators.

### 7.4 State Priority Dashboard

Identifies regions requiring greater attention and intervention.

### 7.5 Recommendations Dashboard

Provides insights for Nutrition awareness programs, Women health initiatives, and Resource allocation strategies.

## 8 Key Insights

---

The analysis revealed:

- Significant disparities in child nutrition indicators across states.
- Certain regions exhibit higher levels of undernutrition.
- Women empowerment indicators vary considerably between states.
- State-specific interventions are necessary for effective social welfare planning.

## 9 Applications

---

The findings of this project can support:

- NGOs and social organizations.
- Policy makers.
- Health and nutrition programs.
- Women empowerment initiatives.
- Data-driven resource allocation.

## 10 Future Scope

---

Possible improvements include:

- Development of a State Need Score Index.
- Inclusion of education-related indicators.
- Advanced predictive analytics.
- Integration of additional government datasets.
- AI-based recommendation systems.

## 11 Conclusion

---

The NayePankh Social Impact Analytics project demonstrates how publicly available datasets can be transformed into meaningful insights using data analytics and visualization techniques. The project highlights the importance of evidence-based decision-making in social welfare and provides a framework that can support organizations in planning more effective interventions.
